Quarkus - Using our Tooling

Quarkus comes with a toolchain enabling developers from live reload all the way down to deploying a Kubernetes application. In this guide, we will explore:

- how to use Maven as a build tool
- how to use Gradle as a build tool
- how to use the native CLI for your toolchain (coming soon)
- how to create and scaffold a new project
- how to deal with extensions
- how to enable live reload
- how to develop your application in your IDE
- how to compile your application natively

Choosing your build tool

Quarkus comes with a toolchain to help you at all development stages. You can use Maven or Gradle as build tool. And we offer a native CLI that is convenient to use (coming soon).

- Maven
- Gradle
